

## Depend on AgStrong for Durability and Versatility

AgStrong Concrete mixes exceed the requirements for concrete in agricultural applications as specified in guidelines set out by the Canadian Farm Builders Association. Mixes across a wide slump range exhibit exceptional overall durability and strength, improved freeze/thaw resistance and increased resistance to chemical attack and erosion from abrasion.

Crop storage structures offer exceptional durability when constructed with AgStrong concrete.

AgStrong is a range of quality concrete mixes categorized for specific applications:

### **AG-20**

Suitable for footings or other buried concrete protected from the elements.

### **AG-25**

Formulated for exterior and interior walls or interior flatwork in a non-corrosive environment.

### **AG-30**

Formulated for most concrete applications except exterior concrete exposed to salt.

### **AG-32**

Reserved for exterior drives and sidewalks subjected to salt application.

### **AG-RP**

This reduced permeability formulation is also suitable for most concrete applications and exhibits decreased porosity that could harbour bacteria or parasites. It has an increased resistance to acidic environments.

AgStrong Concrete mixes are adaptable to include additional formulations.

### **APPLICATIONS**

Can be used for all structural agricultural applications including:

- Drives and walkways that are often exposed to salt and heavy traffic
- Silos, barnyards, barn floors and manure containment that are all subjected to extremely corrosive materials
- Exterior and interior walls that can harbour disease and bacteria
- Footings and piers that may be exposed to all of the above over time

### **AGSTRONG BENEFITS:**

- CBM AgStrong Concrete mixes assure your investment will last longer – maintenance free.
- Livestock stay healthier on the superior quality of AgStrong Concrete mixes.
- Storage facilities of all types are a better investment when constructed with the superior quality of AgStrong Concrete mixes.

AgStrong Concrete mixes are also easier for the contractor to use, making agricultural installations more affordable.
